

CADWORX® STRUCTURE EFFICIENTLY CREATE FULLY INTELLIGENT, 3D STRUCTURAL DESIGNS

Capabilities:

- Intelligent 3D Steel and Concrete Design
- Member Modeling
- Plate Modeling
- Footing and Foundation Modeling
- Slab and Wall Modeling
- Stairs, Ladders, and Hand Rail Arrangements
- Decking and Grating Modeling
- Coping and Mitering
- International Steel Libraries
- Bills of Material
- 2D Output Linked to 3D Model
- Import/Export Integration for Structural Analysis/Detailing
- Weight and Center of Gravity
- Assembly Templates
- Flexible Selection Filters
- Clash Detection

CADWorx® Structure includes the critical tools you need for effective structural design. CADWorx Structure is easy to learn and has reduced the man hours needed to create a structural design as compared to CADWorx Steel by more than 50 percent. Create revenue-earning deliverables more quickly and accurately.

Comprehensive Steel Shape Catalogs

International catalogues of steel shape libraries in both imperial and metric units are included with CADWorx Structure, providing the necessary steel shapes for accurately representing steel members in your 3D model. Historical and new country-specific steel manuals can be added quickly when your company enters new markets.

Easy-To-Place Assemblies

Some of the more detailed work in a structure includes adding secondary steel for access control, and CADWorx Structure provides commands for effortless modeling of these objects. Whether your project includes industry standards or your company has developed its own standard, CADWorx Structure allows the designer to replicate the necessary arrangement of these traffic items. Many customization options are built-in so that these assembly objects can reflect the scenarios encountered in industrial applications. Grating and decking can be rendered to show accurate portrayals of these objects in your 3D model.

Drawings

Designers and engineers can easily create 2D drawings of their 3D models with native dimensioning and annotations. Typical general arrangement drawings include single line-steel and 2D representations that support multiple views.

Reuse Your Structural Model

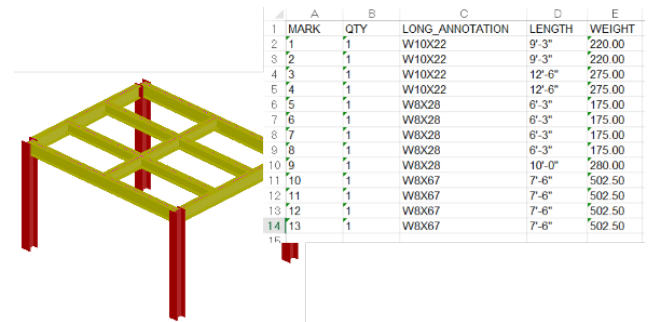

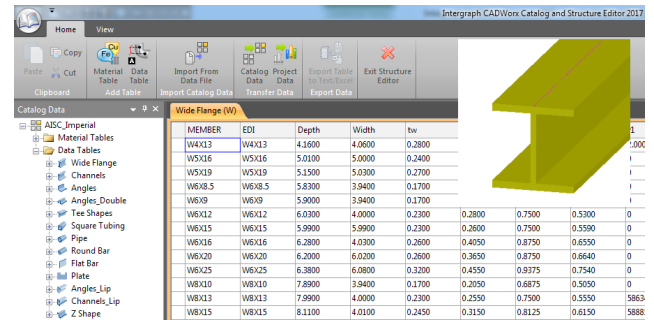

Why spend hours recreating your structural model in order to analyze your structure? Using an industry standard import/export format, the designer can export the structural model to a structural analysis package such as GT STRUDL®, saving many man-hours of rework. Similarly, a designer can export the model to send to a structural detailing contractor and continually update the contractor as changes occur. Any modifications by the engineer or detailer can then be re-imported into the CADWorx Structure model for clash detection.

Bills of Material

Users can create accurate, user-configurable bills of material in the most popular database formats for all of their steel materials in the 3D model. These reports can be used to show total lengths and weights for each size, cut lengths, and selected object lengths and weights. Optionally, a project can be set up to utilize a database format to provide additional reporting capabilities.

Technical Specifications

- AutoCAD®-compatible
- BrisCAD®-compatible
- Microsoft® Windows®-compatible

ABOUT HEXAGON

Hexagon is a global leader in digital solutions that create Autonomous Connected Ecosystems (ACE). Our industry-specific solutions create smart digital realities that improve productivity and quality across manufacturing, infrastructure, safety and mobility applications.

Hexagon's PPM division empowers its clients to transform unstructured information into a smart digital asset to visualize, build and manage structures and facilities of all complexities, ensuring safe and efficient operation throughout the entire lifecycle.

Hexagon (Nasdaq Stockholm: HEXA B) has approximately 20,000 employees in 50 countries and net sales of approximately 3.5bn EUR. Learn more at hexagon.com and follow us @HexagonAB.
