3DS NET ORTHOGEN® FOR INTERGRAPH® CADWORX® PLANT PROFESSIONAL

OrthoGen® for Intergraph® CADWorx® Plant Professional enables 2D plans, sections, and elevations drawings to be created automatically from CADWorx Plant Professional 3D models. Even in today's 3D world, annotated and dimensioned orthographic drawings are still a required deliverable. OrthoGen reduces this process from hours to only minutes.

Integrated with AutoCAD® and CADWorx

The OrthoGen integrated drawing interface quickly reads properties directly from CADWorx model files. Because OrthoGen operates within the AutoCAD environment, users can auto-annotate and conduct other 2D embellishments through AutoCAD viewports. OrthoGen also integrates well with existing user-developed CADWorx commands, details, standards, and block libraries.

Multiple AutoCAD viewports and xRefs

OrthoGen enables the use of multiple AutoCAD viewports and utilizes data from xRefs up to three levels deep. Because of this flexibility, users can create drawings representing multiple scales and views. OrthoGen is tightly integrated into the AutoCAD environment and supports the AutoCAD User Coordinate Systems (UCS).

Flexible settings and standards creation

The user interface enables users to select from thousands of option combinations. These combinations can be saved as drawing styles for future individual or group use. In addition, the production mode interface provides easy enforcement of project standards. To ensure user productivity, OrthoGen comes with 40 predefined and editable drawing styles, so users can be up and running in no time.

Easy label repositioning and modification

When using OrthoGen in the CADWorx environment, you can take advantage of basic AutoCAD commands to move and rotate labels. What is special is that these edits are preserved when running updates on the drawing, eliminating unnecessary rework. Users can also add additional dimensions, hatching, notes, details, and more using basic CADWorx and AutoCAD commands.

Automated column grid references

Creating a single grid model helps to coordinate and automate the placement of grid labels for all drawings on a project. Grid models provide a firm dimensional base that helps eliminate guesswork and the introduction of errors.

Annotations where you want them

The fast, high-resolution, white-space search algorithms enable you to generate orthographic representations that will automatically avoid areas that you do not wish for dimensions or annotations to appear. Commands also help define dimension “edges” on the drawings.
